

Neutralizing antibody responses drive the evolution of human immunodeficiency virus type 1 envelope during recent HIV infection

Simon D. W. Frost[†], Terri Wrin[‡], Davey M. Smith[§], Sergei L. Kosakovsky Pond^{*}, Yang Liu[‡], Ellen Paxinos[‡], Colombe Chappey[‡], Justin Galovich[‡], Jeff Beauchaine[‡], Christos J. Petropoulos[‡], Susan J. Little^{*}, and Douglas D. Richman[§]

An example of mean dN/dS utility

The extent of immune selection pressure drives intra-host evolution in HIV-1

But upon closer look, this pattern is highly variable both across a gene and through time.
